Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time

complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

Reset answer

```
#include<stdio.h>

void function(int n)
{
    int count = 0;
    int b = 0;

    count++;

    for(int i=n/2;i<n;i++) {
        count++;

        for(int j=1;j<n;j=2*j)
        {
            count++;

            for(int k = 1;k < n;k = k * 2){
                count++;

                b++;
                count++;
            }
            count++;
        }
        count++;

    }
    count++;
    printf("%d\n",count);
}

int main()
{
    int n;
    scanf("%d",&n);
    function(n);
    return 0;
}
```
