Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

Reset answer

```
#include<stdio.h>

void reverse(int n)
{
    int count = 0;
    int rev = 0;
    int remainder;

    count++;

    while(n != 0)
    {
        count++;

        remainder = n % 10;
        count++;

        rev = rev * 10 + remainder;
        count++;

        n = n/10;
        count++;

    }

    count++;

    count++;

    printf("%d\n",count);

}

int main()
{
    int n;
    scanf("%d",&n);
    reverse(n);
    return 0;
```

```
41 }
42
```
